**Fig. 2** M2D-Exos induce osteoblast activity and matrix mineralization. **a** Osteogenic genes were upregulated in M2D-Exos-treated BMSCs measured by western blotting analysis; **b** The relative intensity of western blotting analysis; **c** Overexpression of the four osteogenic genes can be detected in M2D-Exos groups measured by qRT-PCR analysis; **d** Alizarin red-mediated calcium staining in BMSCs following treated by PBS (control group), M1D-Exos, and M2D-Exos for 21 days. Scale bar = 10 mm; **e** ALP staining in BMSCs following treated by PBS (control group), M1D-Exos, and M2D-Exos for 14 days. Scale bar = 10 mm; **f, g** The statistical data of Alizarin red-mediated calcium staining and ALP staining. Data are mean  $\pm$  SD of triplicate experiments. \* $p < 0.001$ , \*\* $p < 0.01$ , \*\*\* $p < 0.001$

**Ready to submit your research? Choose BMC and benefit from:**

- fast, convenient online submission
- thorough peer review by experienced researchers in your field
- rapid publication on acceptance
- support for research data, including large and complex data types
- gold Open Access which fosters wider collaboration and increased citations
- maximum visibility for your research: over 100M website views per year

**At BMC, research is always in progress.**
